

UniLog

Efficient supply chains rely on quality logistics services. This quality depends on the skills of the workforce and affects the competitiveness. According to the Logistics Performance Index (LPI) by the Worldbank, all Central Baltic area countries need to improve their logistics skills and competences.

The UniLog Curricula at Bachelor level aim at:

The new set of bachelor modules includes three main areas, where similar improvement needs across the whole Central Baltic area have been identified-new technologies, holistic approach to logistics and managerial skills, including sustainability.

The UniLog Curricula at Master level:

The new set of master modules includes three main areas, where similar improvement needs across the whole Central Baltic area have been identified-new technologies (4ECTS), holistic approach to logistics (8ECTS) and Commercial Law (3 ECTS).

The project is a joint cooperation venture of:

KTH, Sweden | LMK, Finland | EET, Estonia | RTU, | Latvia

This is done with 371.000 euros from the European Regional Development Fund.
