

Lecture #9

Power System Information Modeling

Contents

XML Review

Information Modeling in Power Industry

- Information Exchange Need

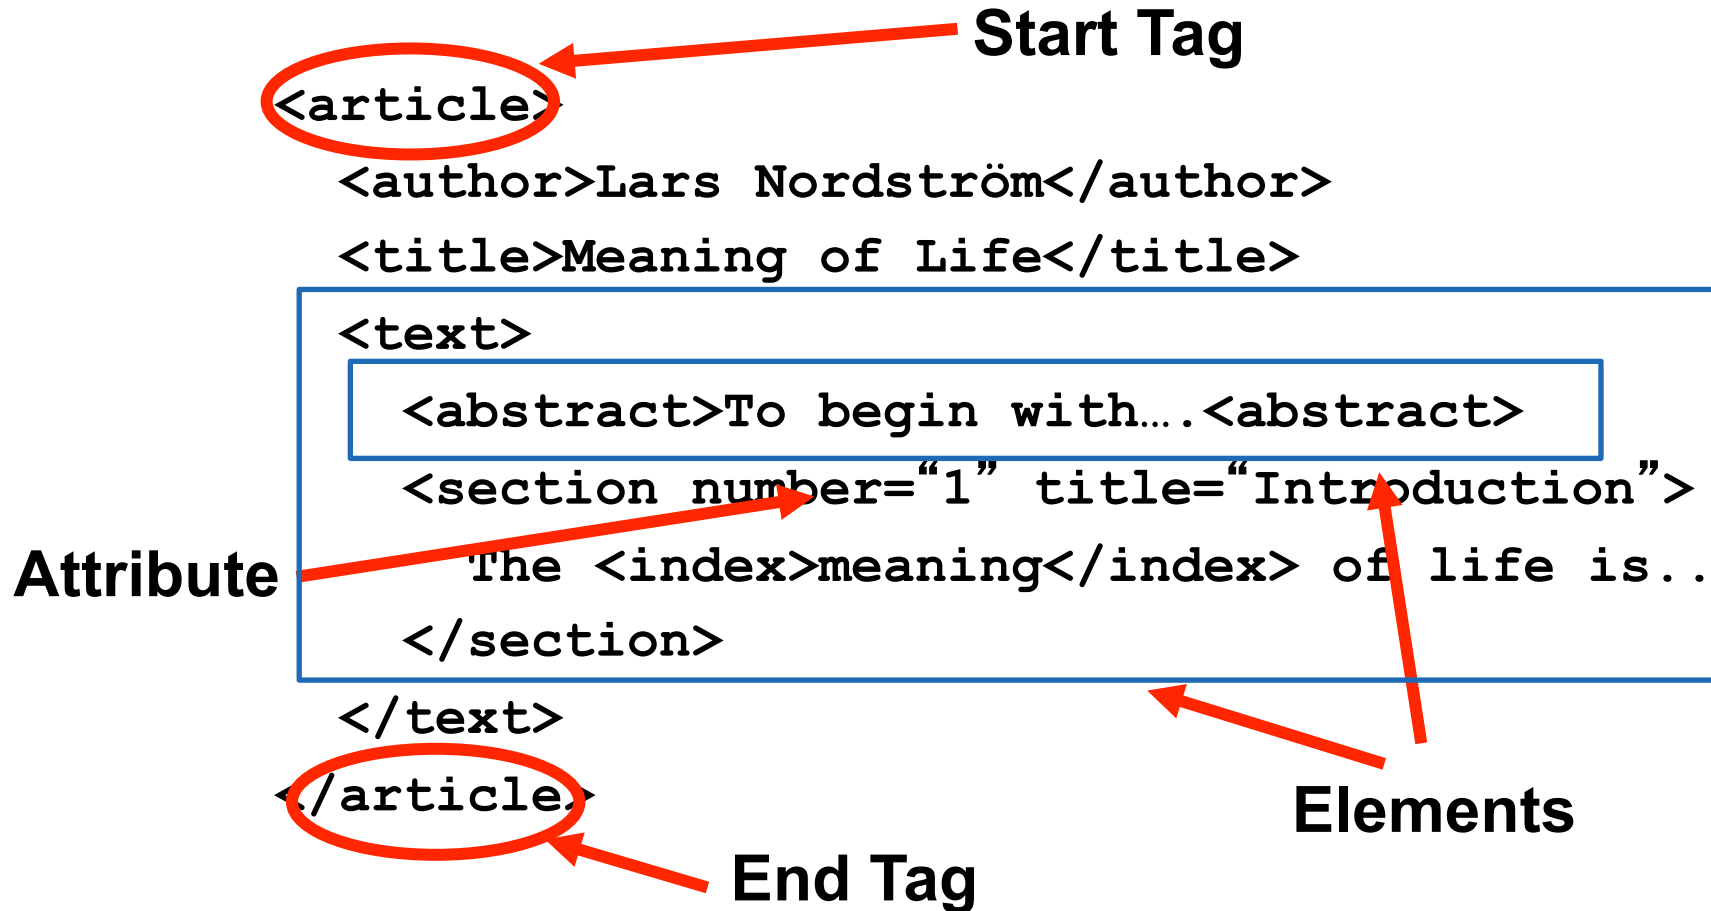

RDF – Resource Description Framework

Information modeling

CIM based Modeling of Power Systems

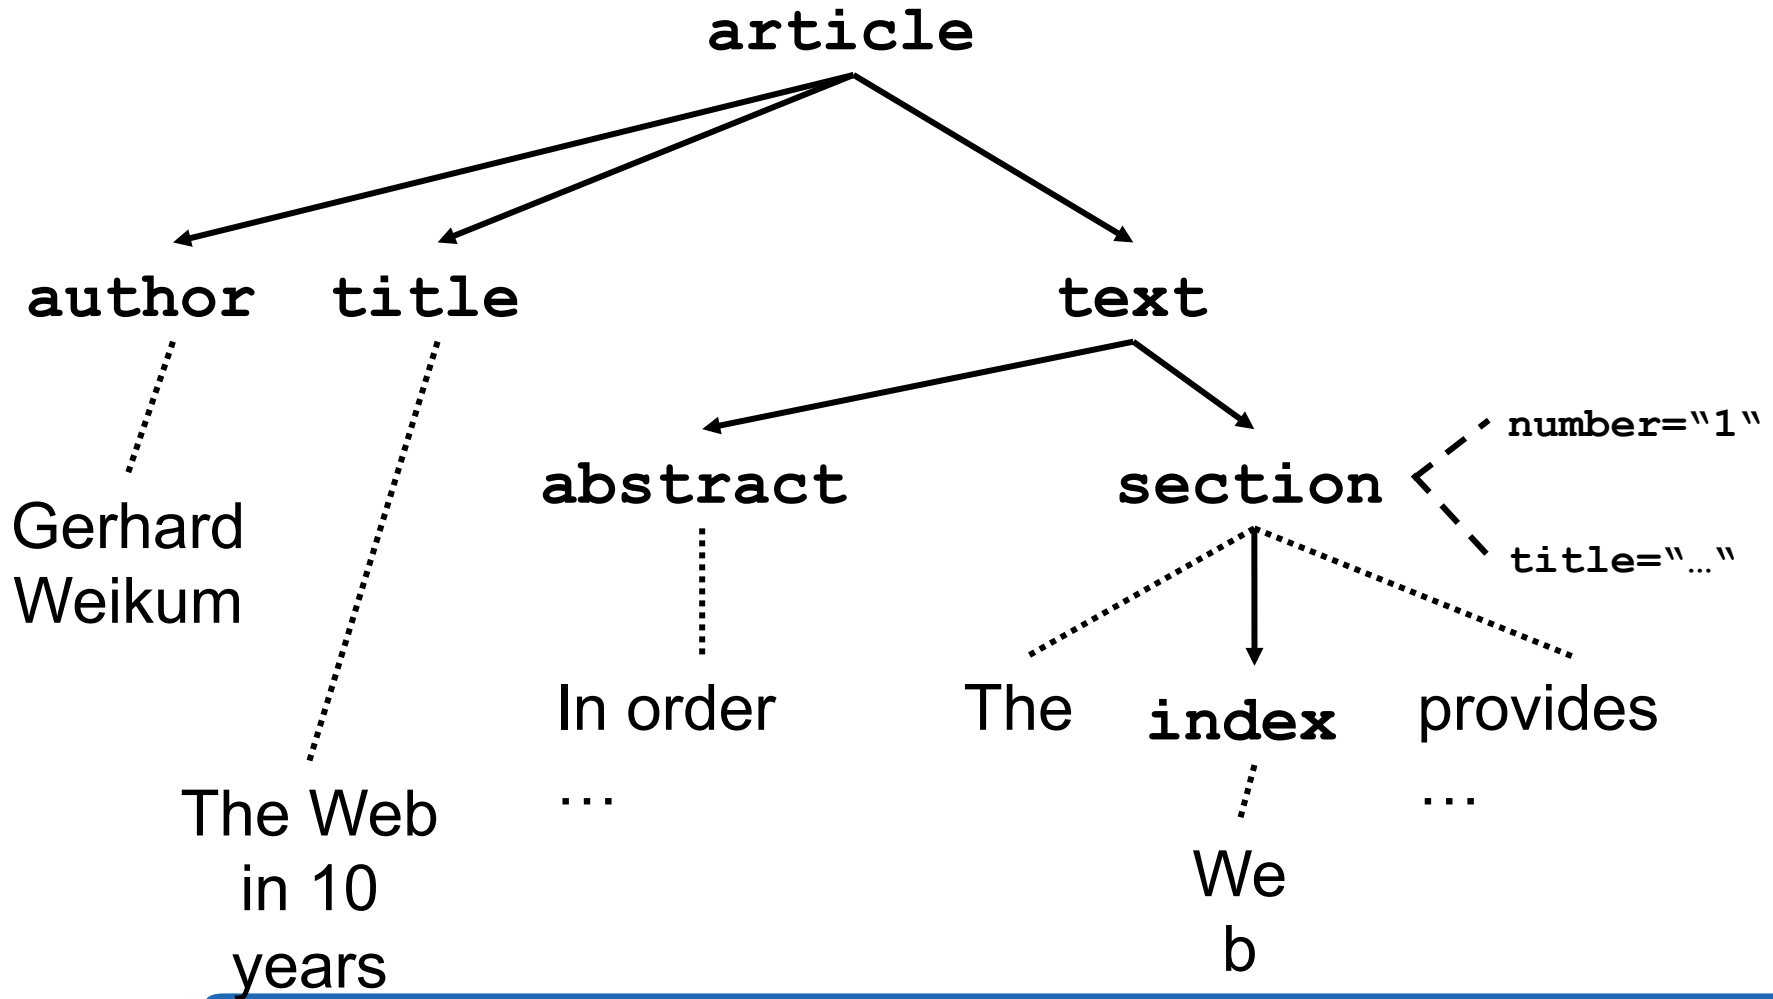

A Simple XML Document

XML Documents as Ordered Trees

Namespaces

```
<library>  
  <description>Library of the CS  
    Department</description>  
  <book bid="HandMS2000">  
    <title>Principles of Data Mining</title>  
    <description>  
      Short introduction to <em>data  
      mining</em>, useful  
      for the IRDM course
```

Semantics of the `description` element is ambiguous
Content may be defined differently
Renaming may be impossible (standards!)

Namespace Syntax

```
<db:book xmlns:db="http://www-dbs/dbs">
```

Prefix as
abbreviation of URI

Unique URI to
identify the
namespace

Signal that
namespace definition
happens

Namespace Example

```
<dbs:book xmlns:dbs="http://www-dbs/dbs">  
  <dbs:description> ... </dbs:description>  
  <dbs:text>  
    <dbs:formula>  
      <mathml:math xmlns:mathml="http://  
www.w3.org/1998/Math/MathML">  
        ...  
      </mathml:math>  
    </dbs:formula>  
  </dbs:text>  
</dbs:book>
```

Information Modeling in Power Industry
- Information Exchange Need

RDF – Resource Description Framework

Information modeling

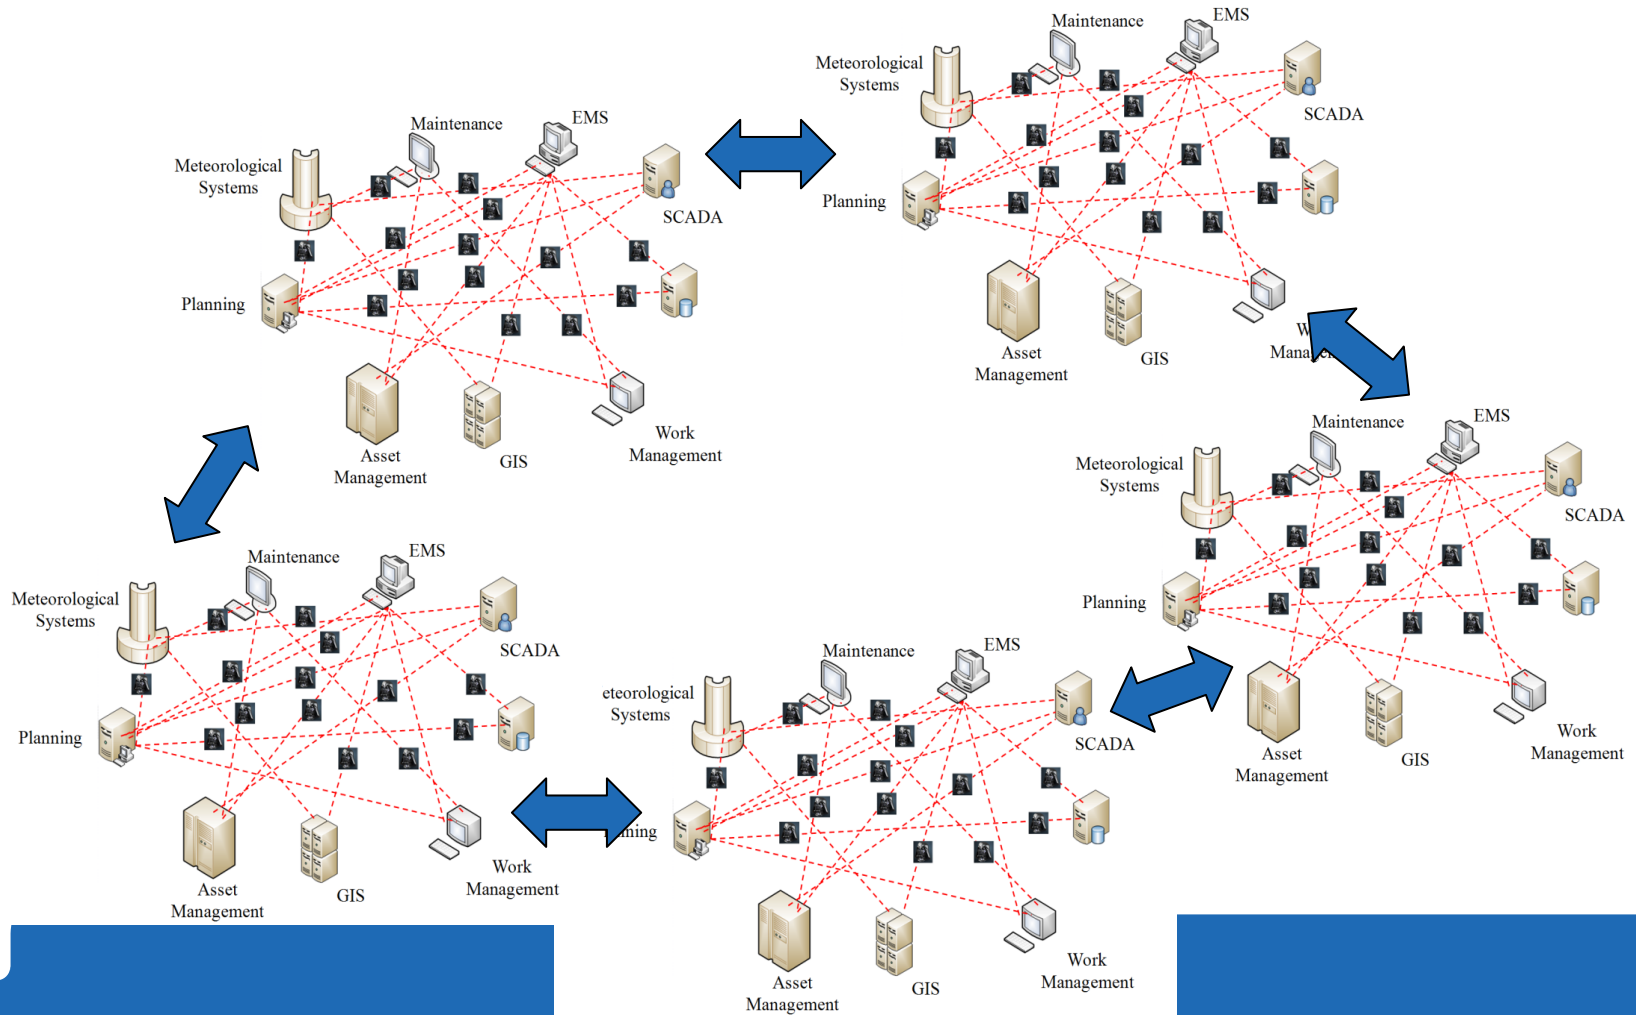

CIM based Modeling of Power Systems

Deregulated Power Industry

Cross-utilities Information Exchange for planning and operation

Data Exchange needs

Exchanging measurements for enabling observability of neighbouring grids

Congestion forecasting, depending on planned production, will there be congestion?

Market settlement – how much was transferred through a line or grid section.

Exchanging information about planned interruptions.

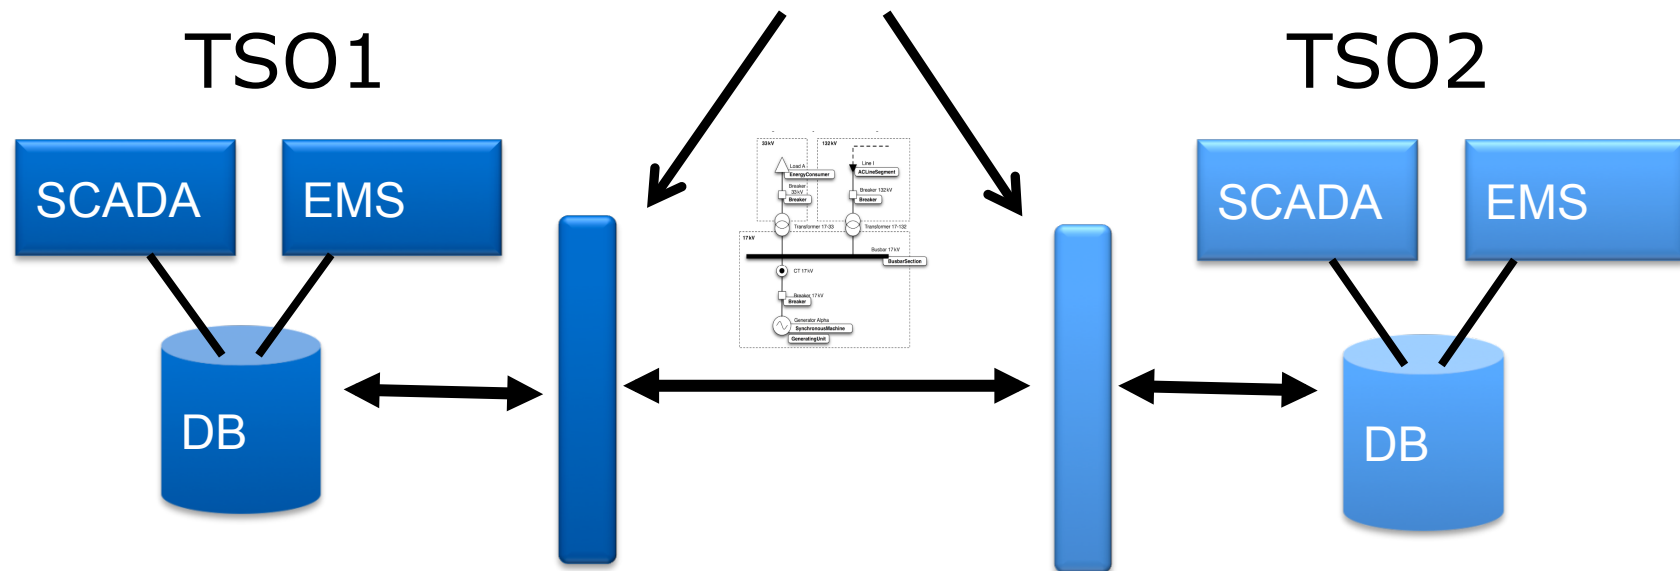

....

Data exchange architecture

Interface

Power system model transfer between TSOs

Serialisation of the Data model

To transfer information between two systems, the data needs to be converted into some type of file/stream.

XML (just as is used in 61850) is a suitable type of file

XML file structure recap

<tag>...contained data...</tag>

But is XML expressive enough?

XML Review

Information Modelling in Power Industry

- Information Exchange Need

RDF – Resource Description Framework

Information modeling

CIM based Modeling of Power Systems

RDF

RDF is "language" to describe relation between things.

It is based on the format:

RDF continued

Consider the following Example:
Library data encoded in XML

```
<library name="Glasgow Library">  
  <book title="History of Glasgow, 1900-1950" author="Walter Hannah">  
    <position section="A" shelf="2"/>  
  </book>  
  <book title="A Brief History of Time" author="Stephen Hawking">  
    <position section="E" shelf="4"/>  
  </book>  
  <book title="History of Glasgow, 1950-2000" author="Walter Hannah">  
    <position section="A" shelf="2"/>  
  </book>  
</library>
```

How to specify that Hannah's books are related?

RDF continued

By allowing relation between XML nodes (elements) relations can be described

A key requirements is of course that nodes (elements) are unqiely identifiable – this can be achieved by Name spaces and URIs

URIs are pointers to unique identifers of tags. In a way the URI is the uniqueness, it may point to nothing.

RDF continued

```
<rdf:RDF xmlns:rdf="http://www.w3.org/1999/02/22-rdf-syntax-ns#"
xmlns:lib="http://www.strath.ac.uk/libraries/2006/library-schema#">
<lib:library lib:name="Glasgow Library">
  <lib:book lib:title="History of Glasgow, 1900-1950" lib:author="Walter
Hannah" rdf:ID="_entry0001">
    <lib:position lib:section="A" lib:shelf="2"/>
    <lib:sequel rdf:resource="#_entry0003"/>
  </lib:book>
  <lib:book lib:title="A Brief History of Time" lib:author="Stephen Hawking"
rdf:ID="_entry0002">
    <lib:position lib:section="E" lib:shelf="4"/>
  </book>
  <lib:book lib:title="History of Glasgow, 1950-2000" lib:author="Walter
Hannah" rdf:ID="_entry0003">
    <lib:position lib:section="A" lib:shelf="2"/>
    <lib:sequelTo rdf:resource="#_entry0001"/>
  </lib:book>
</lib:library>
</rdf:RDF>
```

RDF Schema – defining the RDF format

- Again, we need to define what we can write in the RDF file about books.
- Just like with XML Schema, we defined what we can write in an XML document.
- Enter the RDF Schema
 - This is essentially Object oriented modeling using text/XML

RDF Schema for our library system

```
<rdfs:Class rdf:ID="book">
  <rdfs:label xml:lang="en">Book</rdfs:label>
  <rdfs:comment>A book contained within a library</rdfs:comment>
</rdfs:Class>
```

```
<rdf:Property rdf:ID="sequel">
  <rdfs:label xml:lang="en">Sequel</rdfs:label>
  <rdfs:comment>Indicates that the book has a sequel that is also within the
library</rdfs:comment>
  <rdfs:domain rdf:resource="#book"/>
  <rdfs:range rdf:resource="#book"/>
</rdf:Property>
```

```
<rdf:Property rdf:ID="sequelTo">
  <rdfs:label xml:lang="en">SequelTo</rdfs:label>
  <rdfs:comment>Indicates that the book is the sequel to another book also
within the library</rdfs:comment>
  <rdfs:domain rdf:resource="#book"/>
  <rdfs:range rdf:resource="#book"/>
</rdf:Property>
```

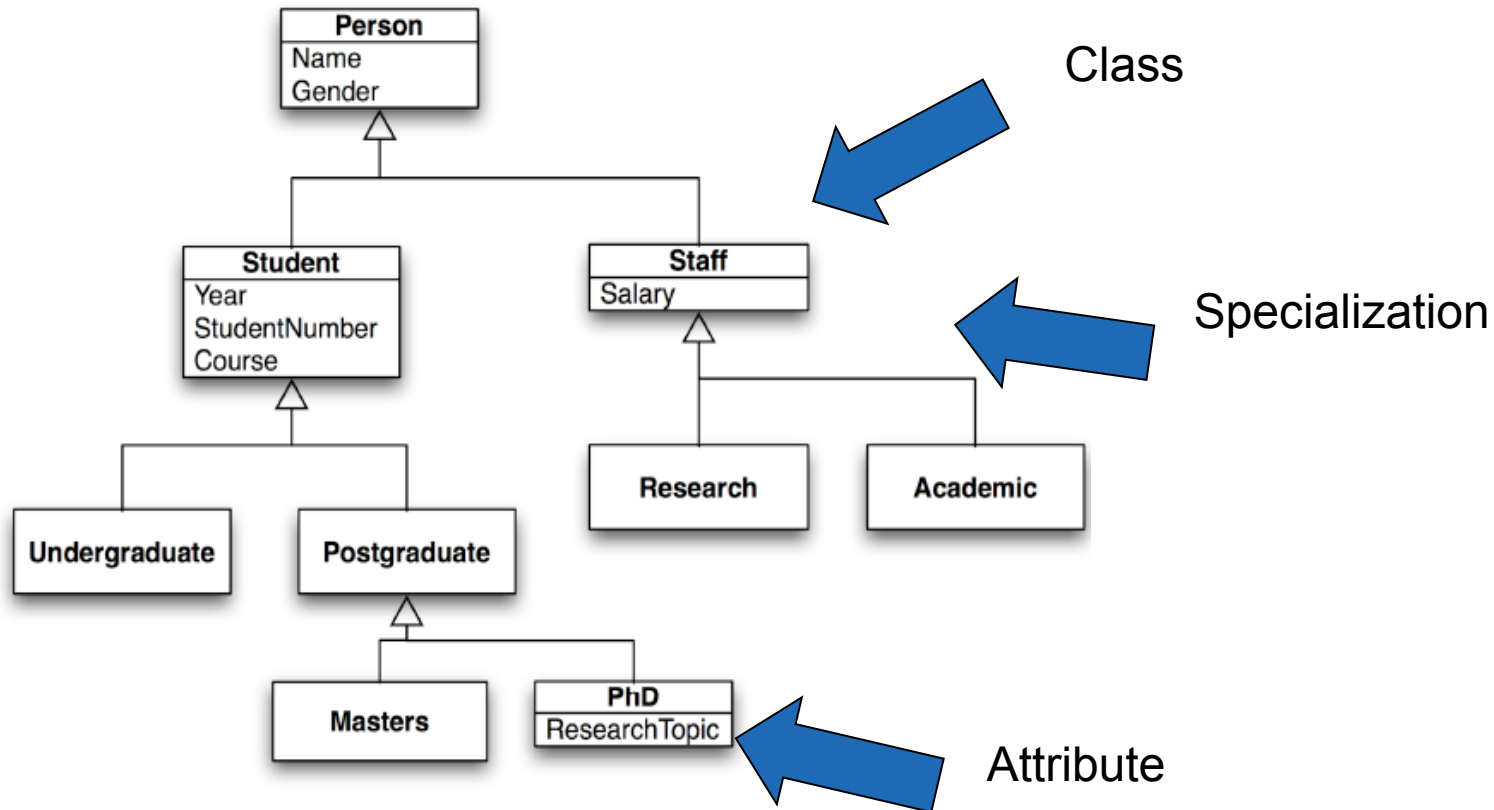

But where does the RDF Schema file come from?

From an Information model!

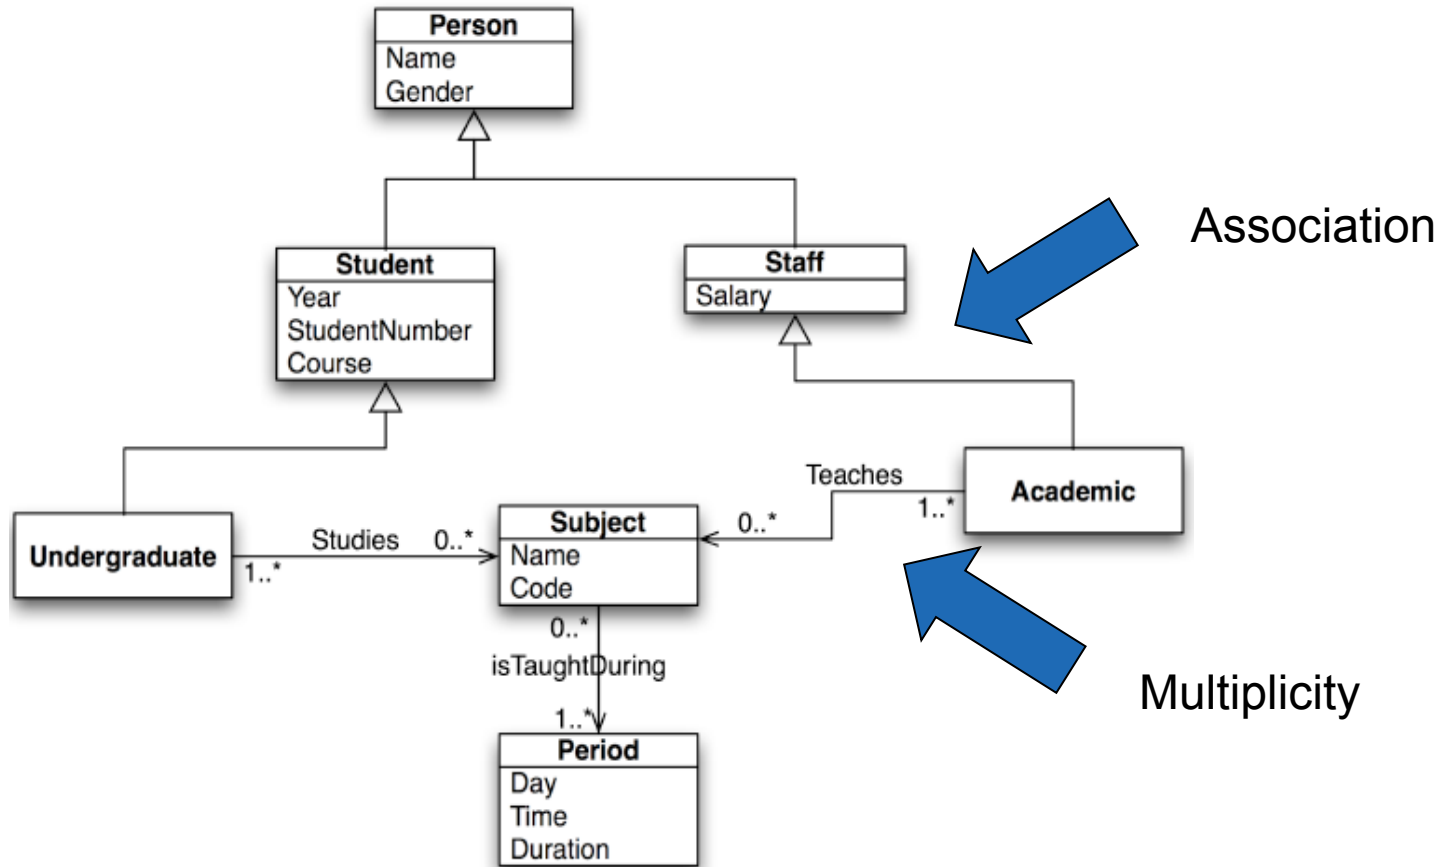

Fundamentals for UML - Class Diagram

Class Hierarchy of people at a University

Object Associations

Class hierarchy of students, staff and subjects

Aggregation and Composition (Association)

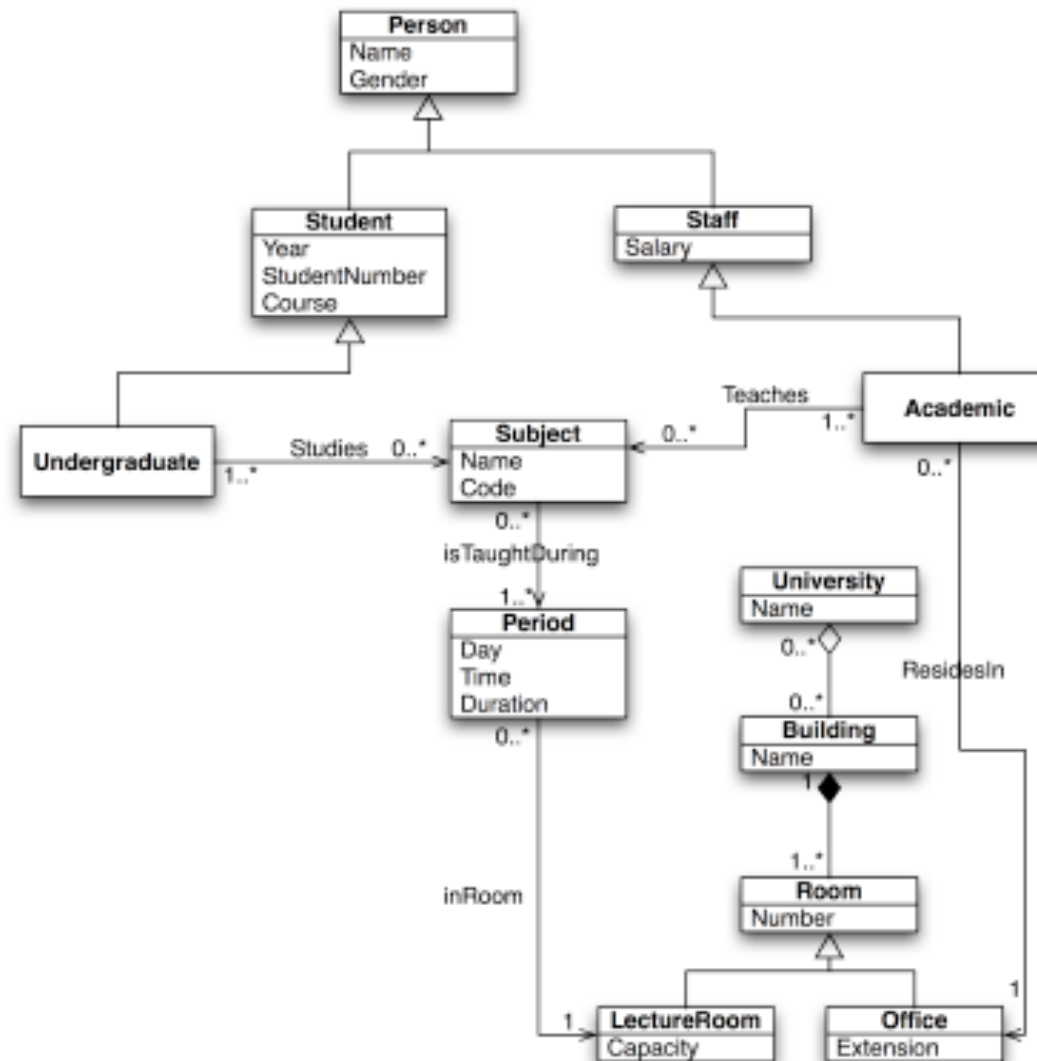

Aggregation

Composition

Classes, Associations, Aggregations and Compositions

What is the CIM?

A Unified Modeling Language (UML) based information model representing real-world objects and information entities exchanged within the value chain of the electric power industry

A tool to enable integration and information exchange to enable data access in a standard way

A common language to navigate and access complex data structures in any database

It is not tied to a particular vendor's view of the world

It also provides consistent view of the world by operators regardless of which application user interface they are using

IEC 61970-301

Semantic model that describes the components of a power system and the relationships between each component

Exchange of data between transmission system operators

Enabling power flow calculation/state estimation on neighbouring transmission systems

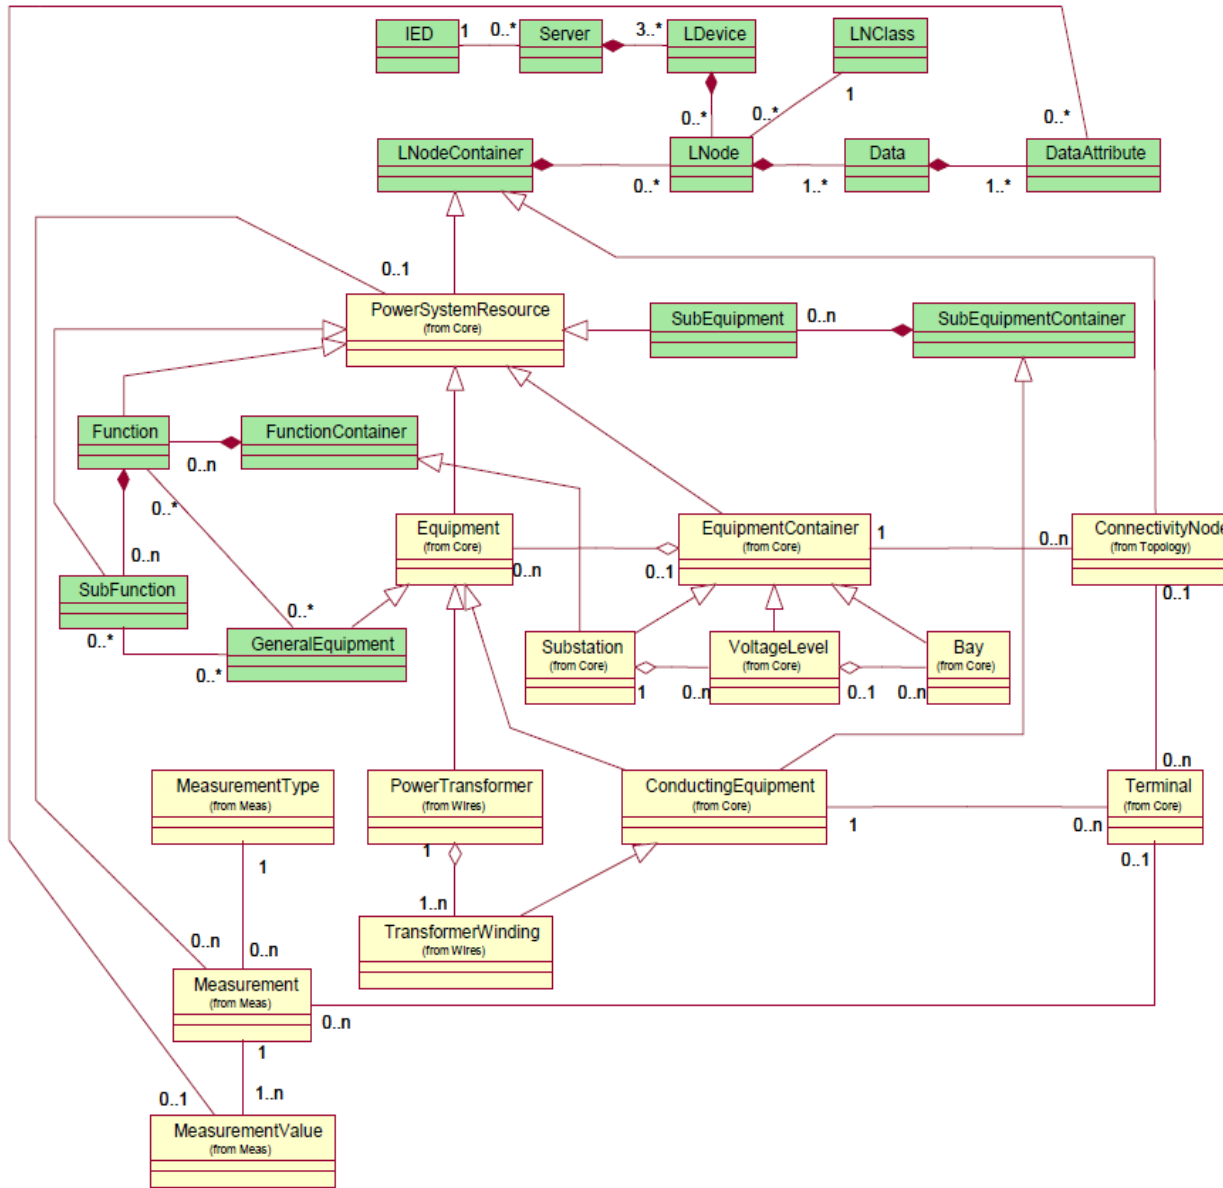

No

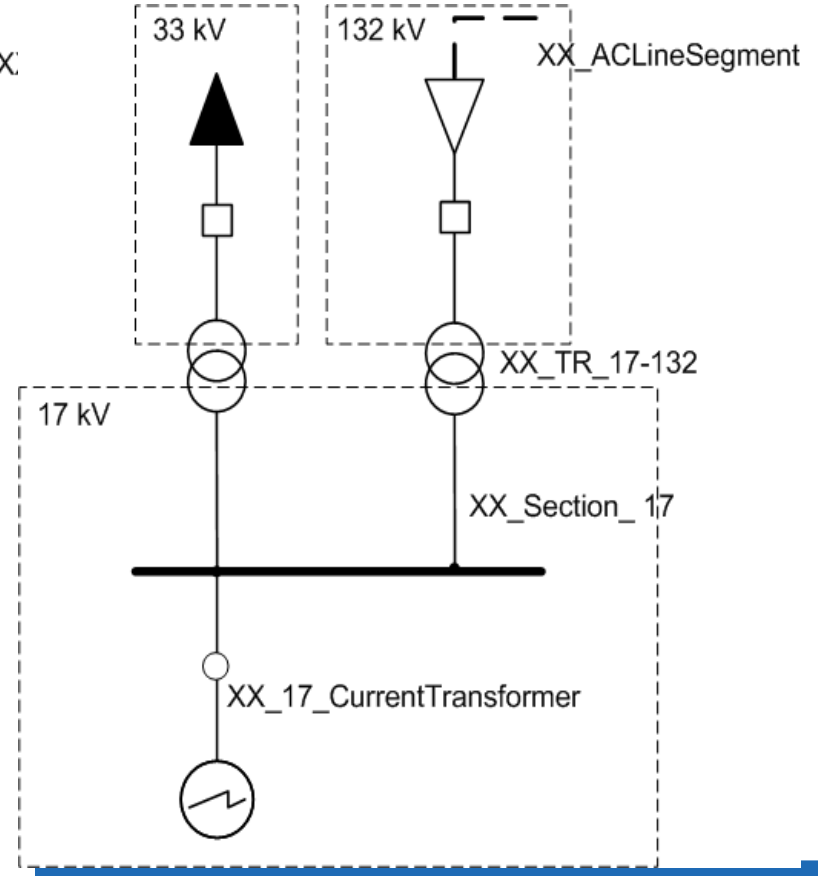

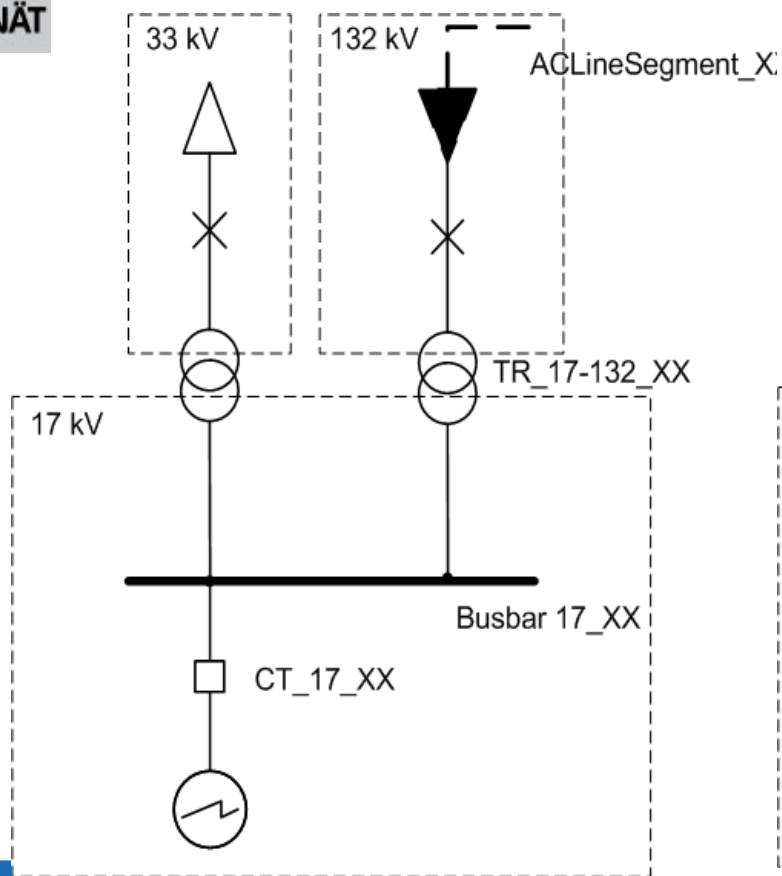

Not yet for dynamic calculations

Systems

Step 1: (Static Model)

Step 2: Schedules (fixed values)

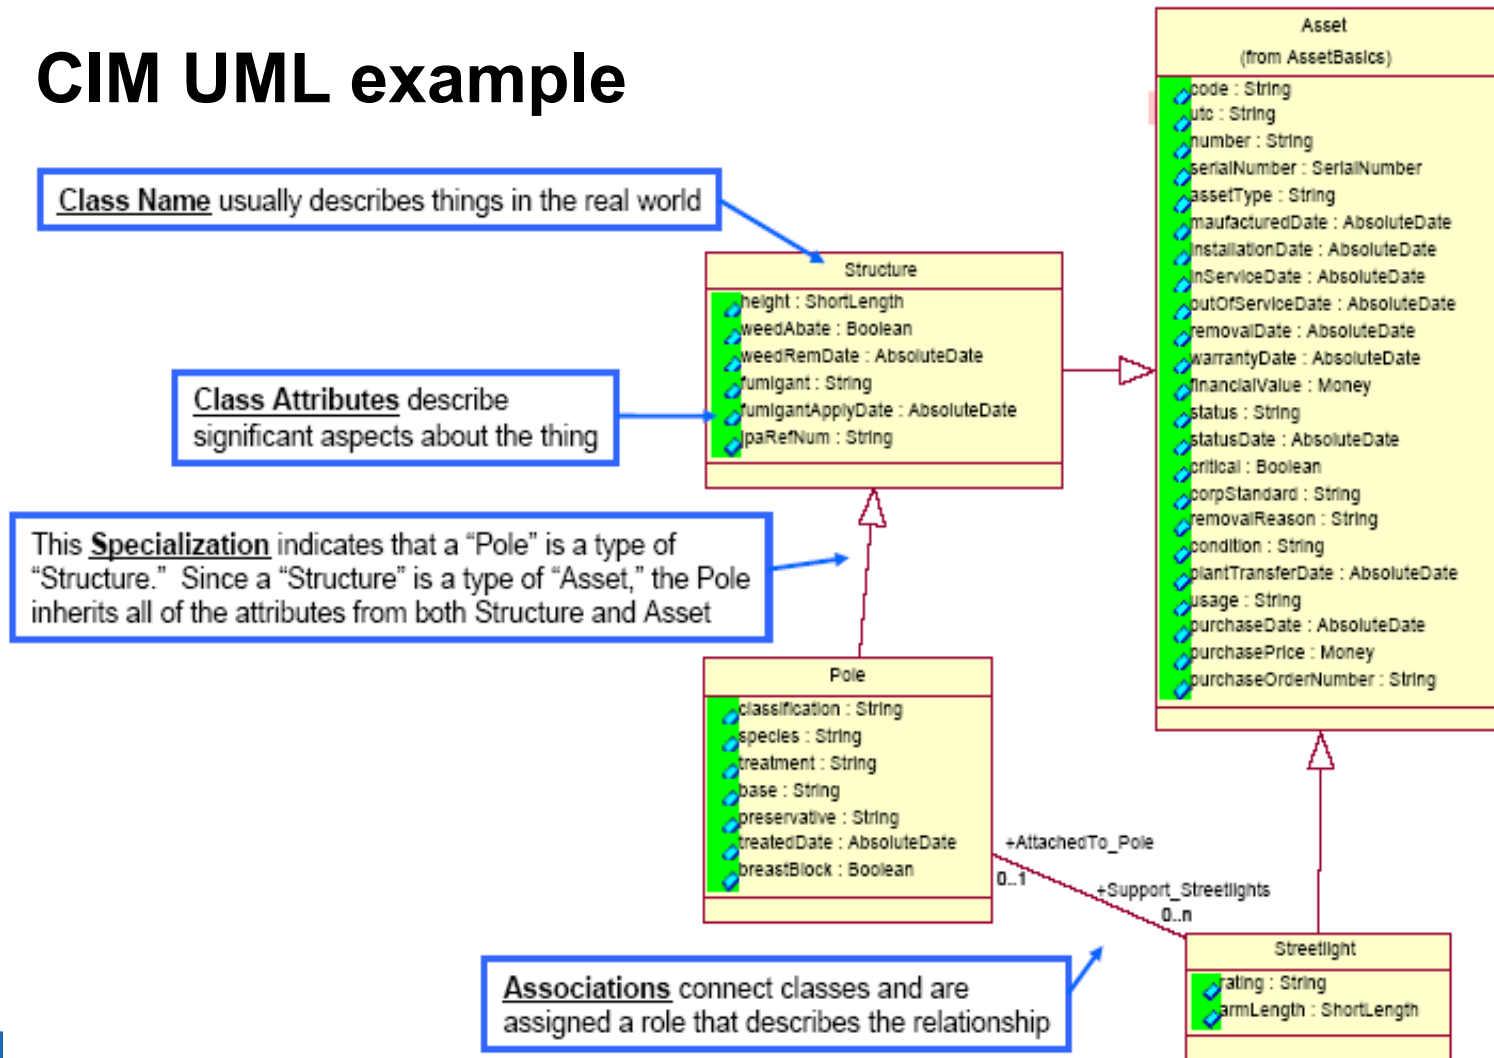

Step 3 : Real-time information

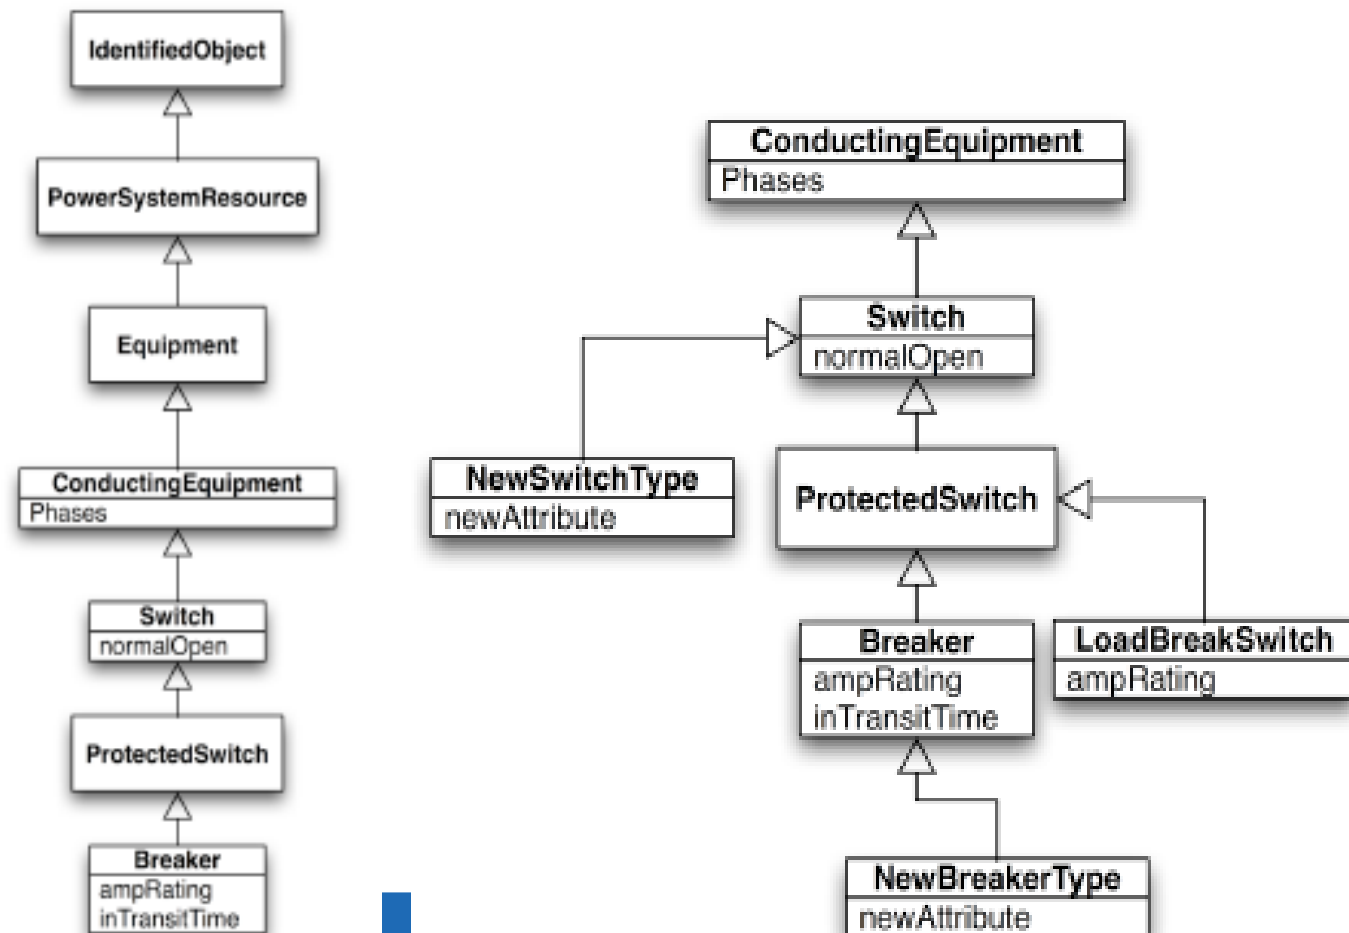

CIM UML example

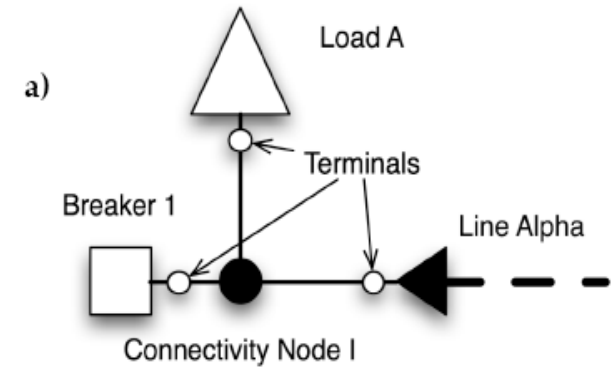

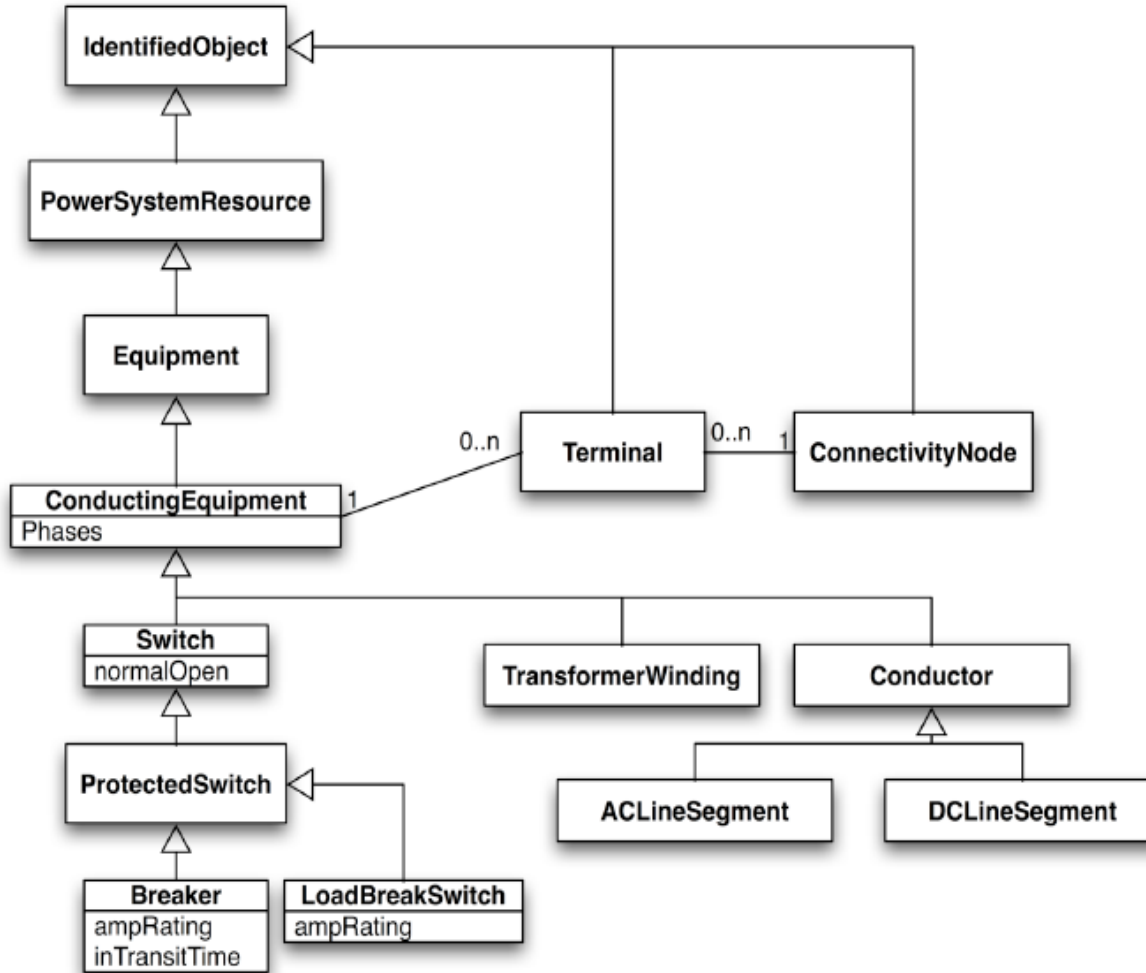

Courtesy of T.Saxton TC57 WG13 chairman

Example Hierarchy in the Breaker Class

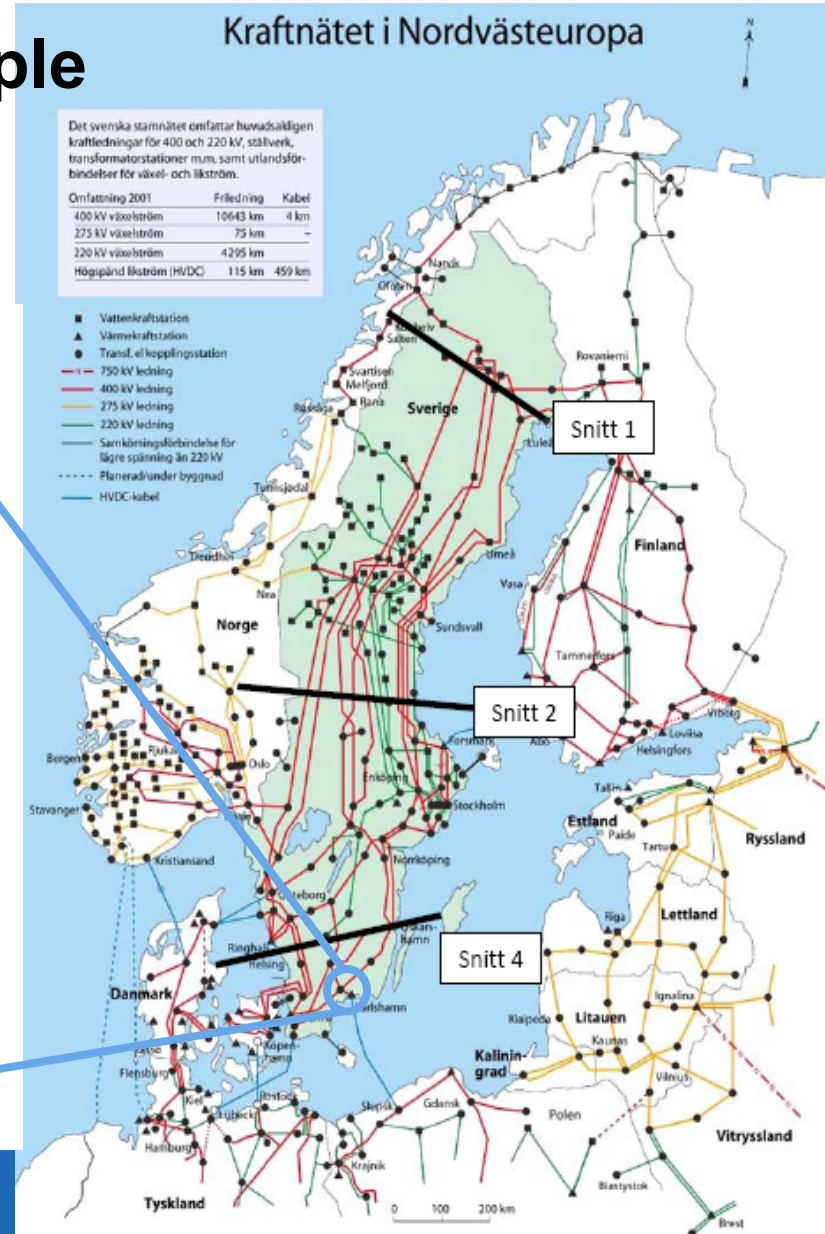

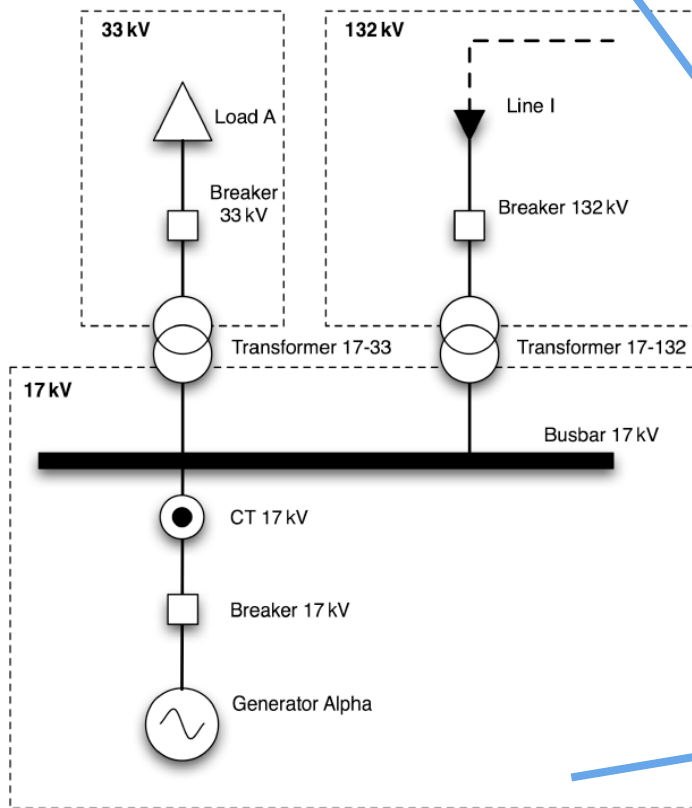

Conducting Equipment and Connectivity

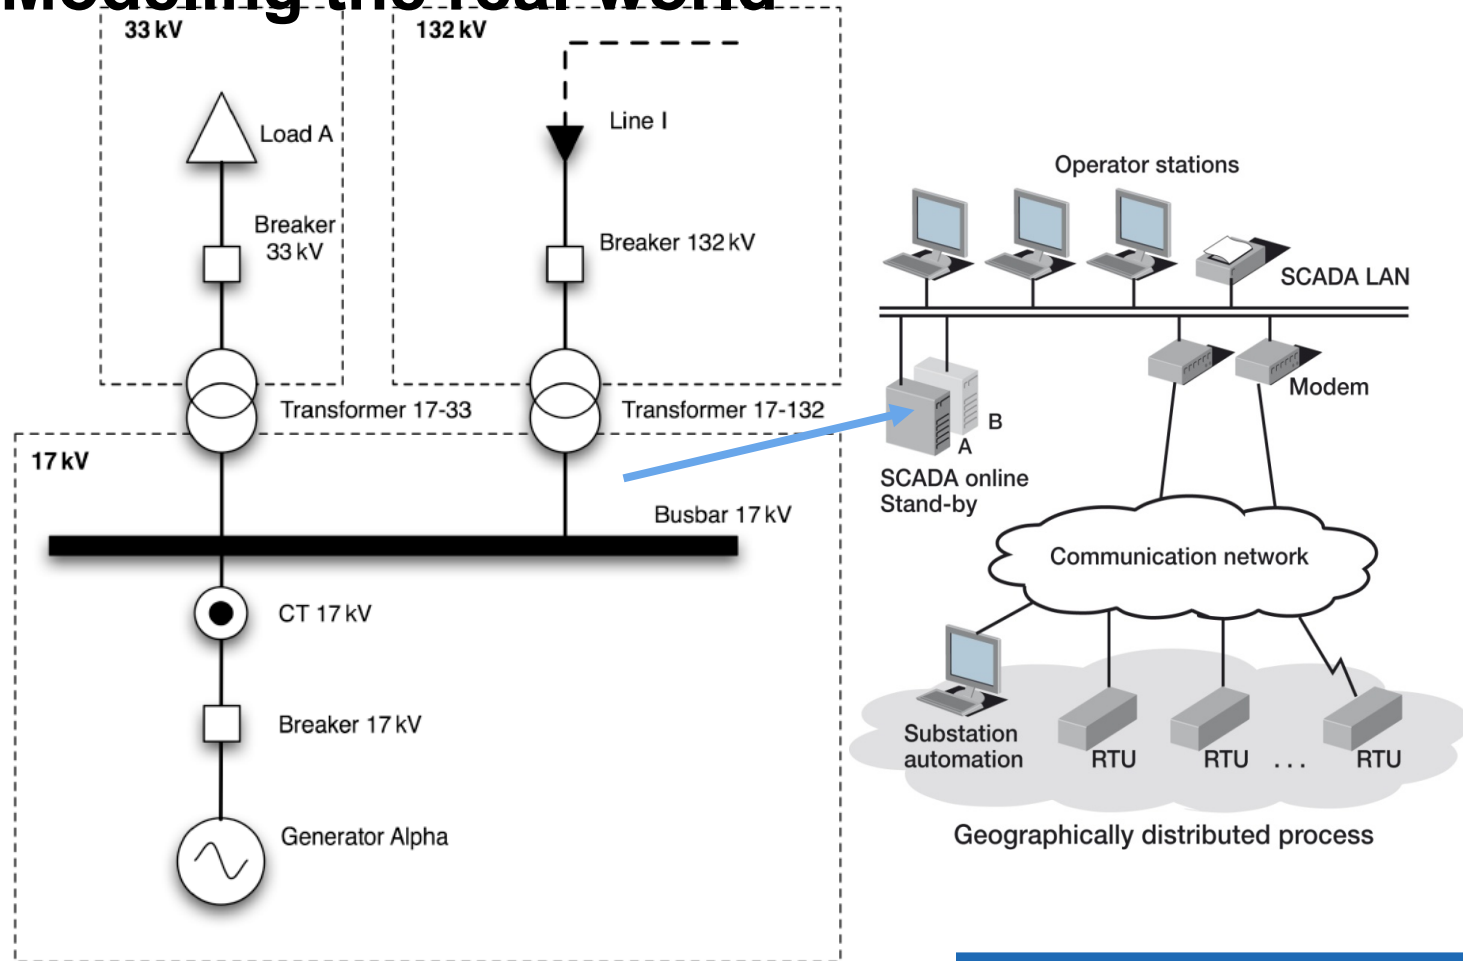

Conducting Equipment and Connectivity class diagram

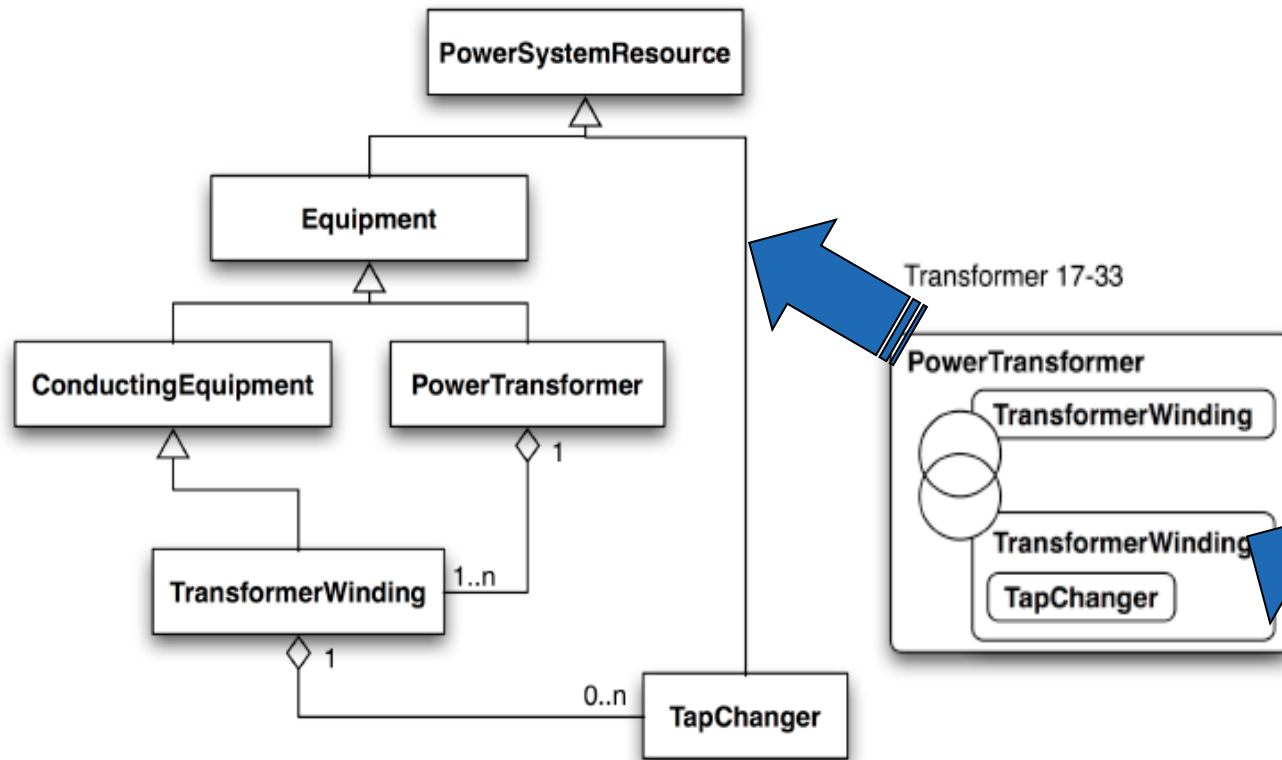

CIM Modeling example

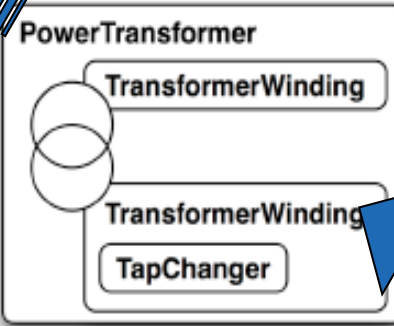

Modeling the real-world

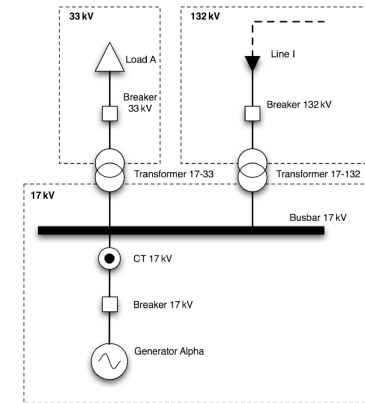

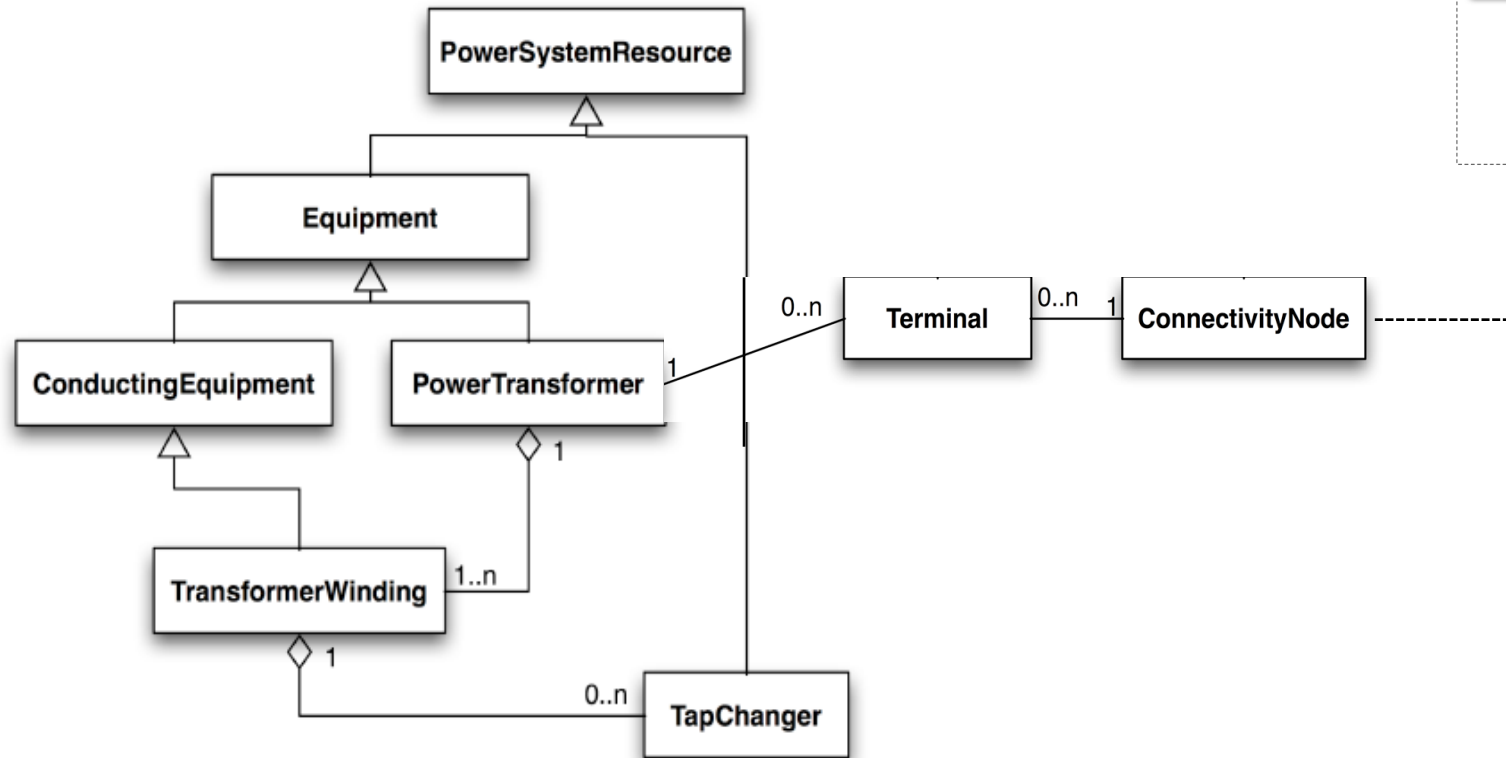

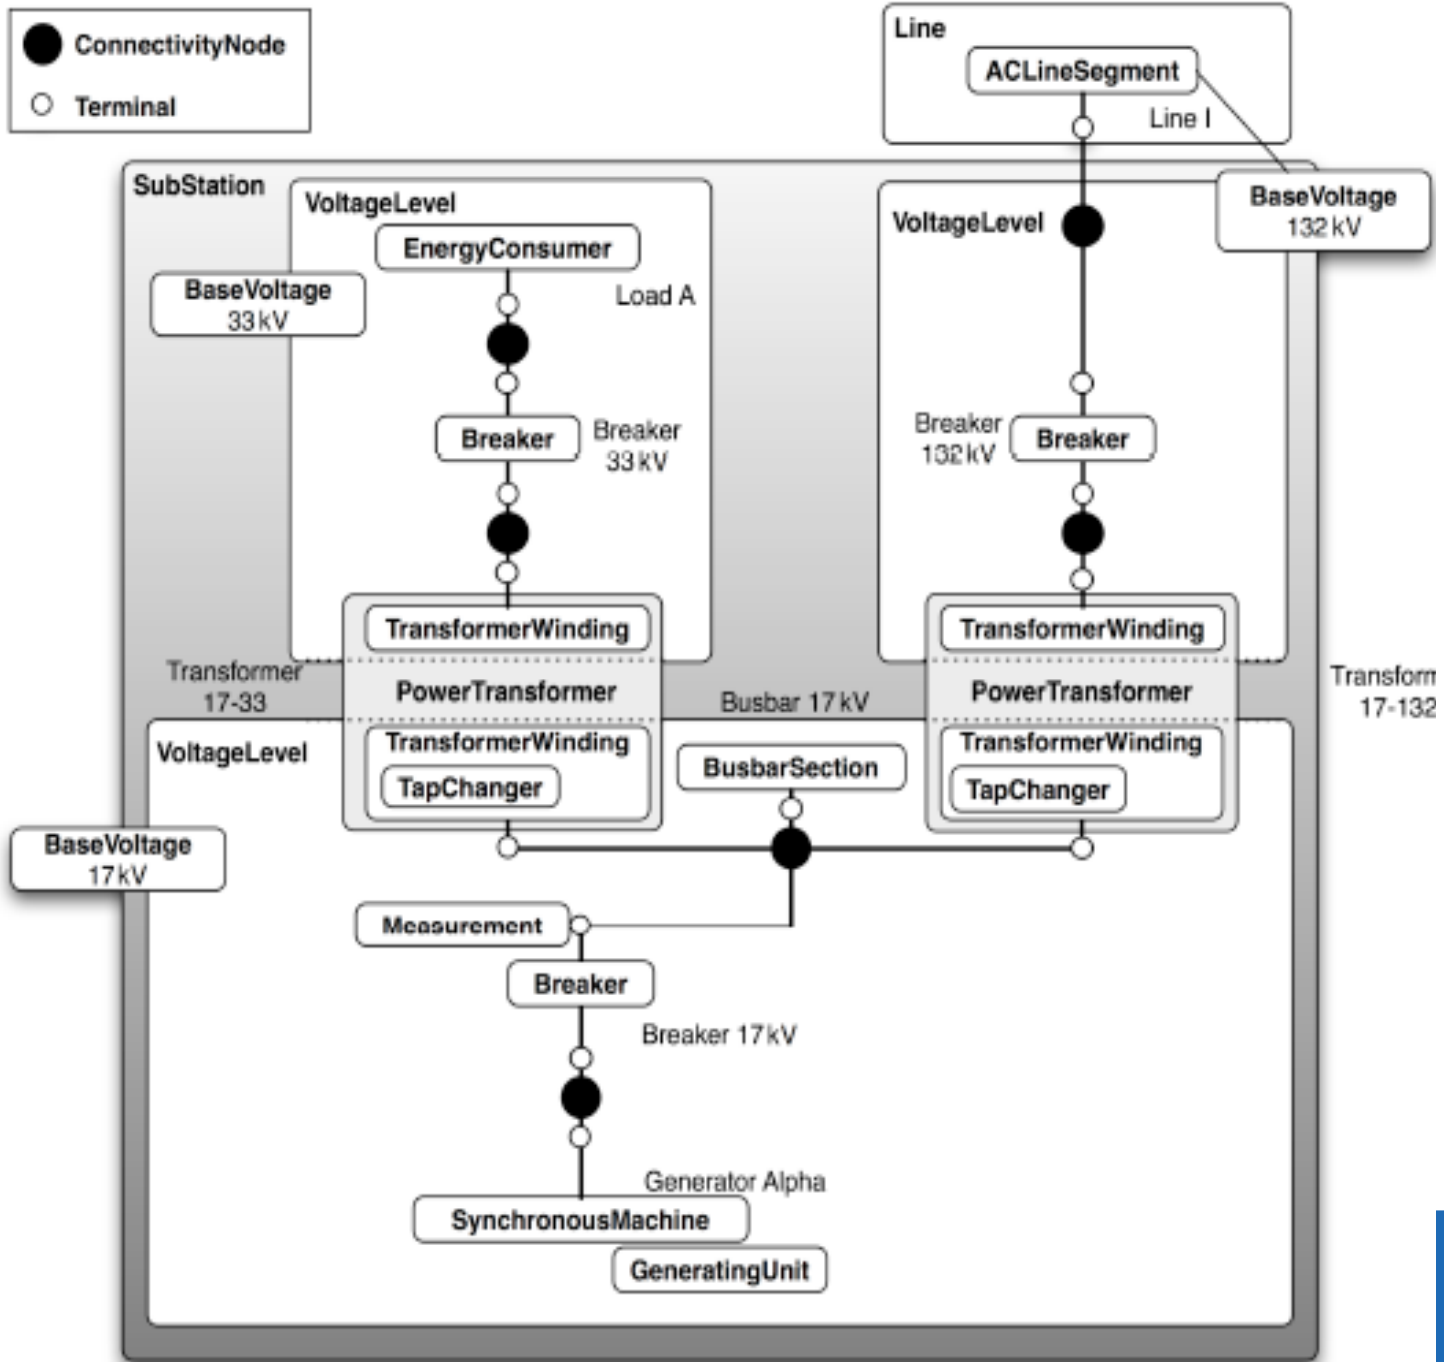

Representing transformers

Transformer 17-33

Now we can “define” the CIM RDFSchema

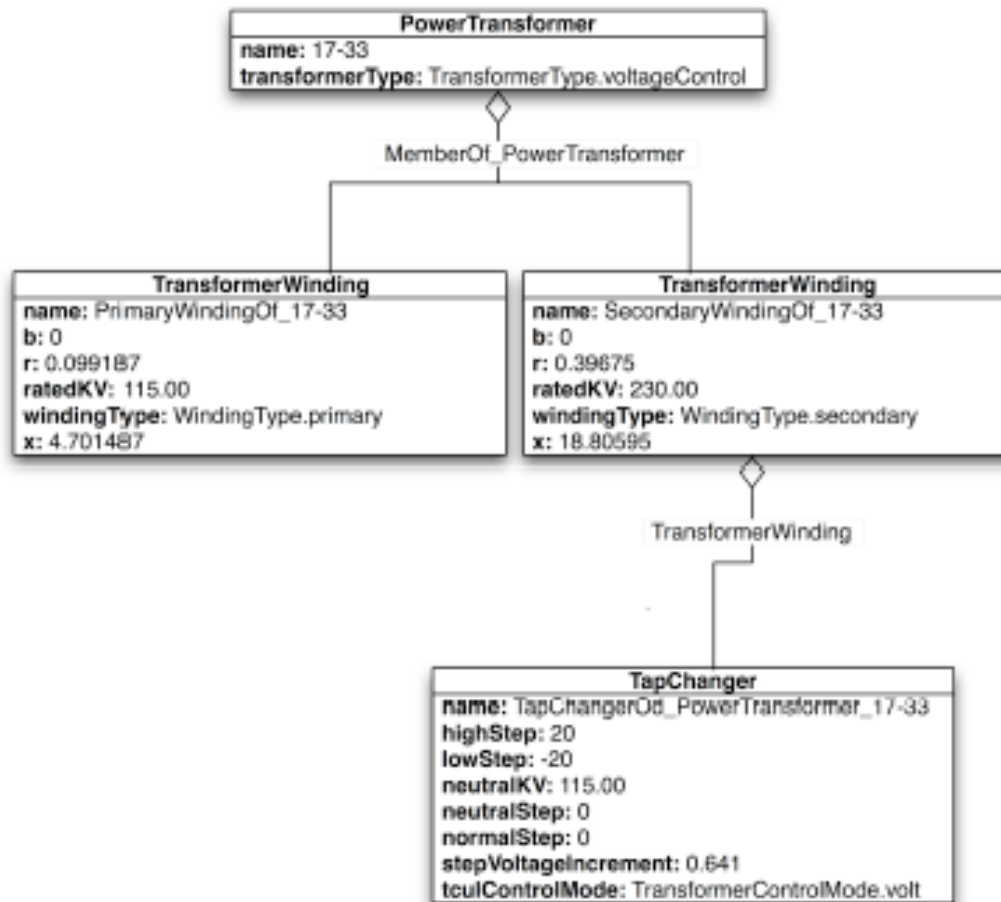

```
<rdfs:Class rdf:ID="PowerSystemResource">  
  <rdfs:label xml:lang="en">PowerSystemResource</rdfs:label>  
  <rdfs:subClassOf rdf:resource="#Naming"/>  
</rdfs:Class>
```

```
<rdfs:Class rdf:ID="Equipment">  
  <rdfs:label xml:lang="en">Equipment</rdfs:label>  
  <rdfs:subClassOf rdf:resource="#PowerSystemResource"/>  
</rdfs:Class>
```

```
<rdfs:Class rdf:ID="ConductingEquipment">  
  <rdfs:label xml:lang="en">ConductingEquipment</rdfs:label>  
  <rdfs:subClassOf rdf:resource="#Equipment"/>  
</rdfs:Class>
```

CIM RDF example

CIM RDF example continued

```
<rdf:RDF xmlns:cim="http://iec.ch/TC57/2003/CIM-schema-cim10#"
xmlns:rdf="http://www.w3.org/1999/02/22-rdf-syntax-ns#">
```

```
<cim:PowerTransformer rdf:ID="PowerTransformer_1733">
  <cim:PowerTransformer.transformerType
rdf:resource="http://iec.ch/TC57/2003/CIM-schema-
cim10#TransformerType.voltageControl"/>
  <cim:Naming.name>17-33</cim:Naming.name>
</cim:PowerTransformer>
```

```
<cim:TransformerWinding rdf:ID="PrimaryWindingOf_PowerTransformer_1733">
  <cim:TransformerWinding.b>0</cim:TransformerWinding.b>
  <cim:TransformerWinding.r>0.099187</cim:TransformerWinding.r>
  <cim:TransformerWinding.ratedKV>115.00</cim:TransformerWinding.ratedKV>
  <cim:TransformerWinding.windingType
rdf:resource="http://iec.ch/TC57/2003/CIM-schema-cim10#WindingType.primary"/>
  <cim:TransformerWinding.x>4.701487</cim:TransformerWinding.x>
  <cim:TransformerWinding.MemberOf_PowerTransformer
rdf:resource="#PowerTransformer_302"/>
  <cim:Naming.name>PrimaryWindingOf_17-33</cim:Naming.name>
</cim:TransformerWinding>
```

```
<cim:TransformerWinding rdf:ID="SecondaryWindingOf_PowerTransformer_1733">
  <cim:TransformerWinding.b>0</cim:TransformerWinding.b>
  <cim:TransformerWinding.r>0.39675</cim:TransformerWinding.r>
  <cim:TransformerWinding.ratedKV>230.00</cim:TransformerWinding.ratedKV>
  <cim:TransformerWinding.windingType
rdf:resource="http://iec.ch/TC57/2003/CIM-schema-
cim10#WindingType.secondary" />
  <cim:TransformerWinding.x>18.80595</cim:TransformerWinding.x>
  <cim:TransformerWinding.MemberOf_PowerTransformer
rdf:resource="#PowerTransformer_302" />
  <cim:Naming.name>SecondaryWindingOf_17-33</cim:Naming.name>
</cim:TransformerWinding>

<cim:TapChanger rdf:ID="TapChangerOf_PowerTransformer_1733">
  <cim:TapChanger.highStep>20</cim:TapChanger.highStep>
  <cim:TapChanger.lowStep>-20</cim:TapChanger.lowStep>
  <cim:TapChanger.neutralKV>115.00</cim:TapChanger.neutralKV>
  <cim:TapChanger.neutralStep>0</cim:TapChanger.neutralStep>
  <cim:TapChanger.normalStep>0</cim:TapChanger.normalStep>
  <cim:TapChanger.stepVoltageIncrement>0.641</cim:TapChanger.stepVoltageIncre
ment>
  <cim:TapChanger.tculControlMode rdf:resource="http://iec.ch/TC57/2003/CIM-
schema-cim10#TransformerControlMode.volt" />
  <cim:TapChanger.TransformerWinding
rdf:resource="#PrimaryWindingOf_PowerTransformer_302" />
  <cim:Naming.name>TapChangerOf_PowerTransformer_17-33</cim:Naming.name>
</cim:TapChanger>

</rdf:RDF>
```
