2015

# Grading for DD1301

# Grading for DD1301

- You must have completed:
  - Introduction to Linux OR Advanced Intro to KTH systems
  - Latex Lab OR HTML exercise
- Lab assistants will check your work
- Grades will appear on RAPP soon after

# A brief history of the web...

1945 – Vannevar Bush wrote about the Memex in “As we may think”

# 1963 – Ted Nelson invents the terms hypertext and hypermedia

- Concept of linked content
- Concerned with the complex nature of the creative impulse
- “Everything is interwingled”

**“ORDINARY” HYPertext**

1990 – TimBL  
submits proposal  
at CERN for a  
WorldWideWeb for  
scientists and  
builds the 1st  
Web Server

And we  
thanked  
him with  
this...

# Behind the Web Page

## Exploring HTML

# Firefox Developer Tools Demo

- Launch Firefox (other browsers have similar tools)
  - Goto Tools / Web Developer
  - Select Inspector and observe mousing over page elements
  - Select the Network Tab in the Inspector Panel
  - In Inspector Panel Settings, switch on the 3D mode (may differ according to your version of FireFox)

Mozilla Firefox Start Page

# Building Web Pages

## HyperText Markup Language

# HTML Demo

- Basic page structure
  - **doctype**, **html**, **head** and **body** tags
- Content
  - headers (**h1**, **h2**, ...) and paragraphs (**p**)
  - bullet (**ul**), numbered lists (**ol**) and list items (**li**)
  - images (**img**) and links (**a**)
- Block and inline
  - dividers and sections (**div**, **section**) and content spanning (**span**)

```

<!DOCTYPE html>
<html>
<head>
  <title>My First Page</title>
</head>
<body>
<section>
  <h1>Big Title</h1>
  <p>Lorem ipsum dolor sit amet, consectetur <a href="www.google.com">adipisicing</a> elit, sed do eiusmod
tempor incididunt ut labore et dolore magna aliqua. Ut enim ad minim veniam,
quis nostrud exercitation ullamco laboris nisi ut aliquip ex ea commodo
consequat. Duis aute irure dolor in reprehenderit in voluptate velit esse
cillum dolore eu fugiat nulla pariatur. Excepteur <span style="color:red;">sint occaecat cupidatat non
proident, sunt in culpa qui officia</span> deserunt mollit anim id est laborum.</p>

  <ol>
    <li>first item</li>
    <li>second item</li>
    <li>third item</li>
  </ol>

  <ul>
    <li>First item</li>
    <li>Second item</li>
    <li>Third item</li>
  </ul>
</section>
<div>
  <h2>A Less Big Title</h2>

  
</div>
</body>

```

# Adding Style

## Cascading Style Sheets

# Adding Style with CSS

- HTML alone is quite basic
- CSS declares a series of style rules to be applied to HTML
- Another language :-)
  
- Short Demo
  - Creating a **style** section
  - Declaring rules (**selector, property & value**)
  - Specifying what to style (**element, id and class**)

```
<!DOCTYPE html>
<html>
<head>
  <title>My First Page</title>
  <style type="text/css">
    h1 {
      color: blue;
      background-color: red;
    }

    #special {
      color: green;
      background-color: black;
    }
  </style>
</head>
```

# Practical Advice

## Content Management and Client-side Frameworks

# \* That page was uninspiring...\*

- Speed, Style and Quality
- **Option 1: Use a Content Management System**
  - Example: create a Wordpress blog
  - Fast, hosted, with few technical skills required
  - Less control
- **Option 2: Use a Client-side framework**
  - Example: create a Bootstrap page
  - More control but more developer experience required

# \* Review \*

- HTML is the markup language of the Web
- Most browsers can explore what makes a web page
- HTML alone is quite basic; CSS adds style
  
- In practical terms, there are better ways to create web pages
  - Use a hosted Wordpress site
  - Use a client-side framework
