

SCHOOL OF ELECTRICAL ENGINEERING

Signal Theory: EQ1220 / EQ1210

Reading Assignment: Sampling (5/5) 2013–10–02,

Notice:

To be collected before Lecture 10.

The essay consists of one question. If you successfully answer all questions, you obtain 1 bonus point for part A of the final exam. An essay with partially correct answers will give you 1/2 point.

For the answers you should not copy text from a textbook. Group work is also not allowed, but feel free to discuss with your fellows. The reports will be checked against plagiarism.

Be brief, i.e., at most 1 page.

Explain (in your own words) ...

1. ... *Pulse Amplitude Modulation*. (Hint) Your short essay could for example answer the following questions: what is the goal of PAM? How does it work? What mathematical relations exist between input and output signals? You should also describe the PAM of stochastic processes with formulas, figures and/or examples.
