- decision under risk and ignorance,
- collective decision theory,
- the history of decision theory,
- formalization of decision problems.

Course contents

In many situations we are forced to make decisions without having complete knowledge of the outcomes of our choices. The aim of this course is to provide a foundation for reflection on how rational choices can be made in such situations. We will discuss concepts such as rationality, preferences, goals, uncertainty, and utility. What does it mean to say that a choice is rational? How should decisions be made under uncertainty and risk? What importance does the expected utility of different options have in a decision situation? This course will also serve as an introduction to game theory and social decision theory.
