

CK1050 Polymeric Materials 7.5 credits

Polymera material

This is a translation of the Swedish, legally binding, course syllabus.

If the course is discontinued, students may request to be examined during the following two academic years

Establishment

Course syllabus for CK1050 valid from Spring 2025

Grading scale

A, B, C, D, E, FX, F

Education cycle

First cycle

Main field of study

Technology

Specific prerequisites

In total 45 higher education credits in the main field of study of Technology.

Language of instruction

The language of instruction is specified in the course offering information in the course catalogue.

Intended learning outcomes

After passing the course, the student must be able to:

- Describe polymers, using eg molar mass, structure, conformation, configuration, transitions
- Describe common polymerization reactions, such as the general reaction steps and reaction mechanisms
- Using calculations, describe polymers and polymerizations, e.g. molar mass, conversion, composition
- Explain the properties of polymeric materials, e.g. how mechanical and rheological properties depend on the polymer's structure, morphology, processing
- Justify material and process choices for manufacturing polymeric parts
- Relate plastic to its environmental impact with regard to eg degradation, stability and recycling
- Carry out and evaluate laboratory work in polymer technology, including polymer synthesis and processing methods

Course contents

The aim of this course is to introduce the student to polymer materials. Polymer materials is today a common material used in all fields of applications. Polymer materials with a wide variety of properties can be produced and the properties be tailored with respect to the end-use demands. Basic material knowledge and concepts for material groups in different technique areas is of importance also for engineers not directly involved in material selection processes. The present course describes the production, characterization, physical, chemical, and mechanical properties of polymers on a general basic level.

Examination

- LAB1 - Laborations, 2.0 credits, grading scale: P, F
- SEM1 - Seminar, 2.5 credits, grading scale: A, B, C, D, E, FX, F
- TEN1 - Written exam, 3.0 credits, grading scale: A, B, C, D, E, FX, F

Based on recommendation from KTH's coordinator for disabilities, the examiner will decide how to adapt an examination for students with documented disability.

The examiner may apply another examination format when re-examining individual students.

Ethical approach

- All members of a group are responsible for the group's work.

- In any assessment, every student shall honestly disclose any help received and sources used.
- In an oral assessment, every student shall be able to present and answer questions about the entire assignment and solution.
